PROFESSIONAL SUMMARY

AI-focused Software Engineer with experience in Python-based AI application development and Large Language Model (LLM) integration. Skilled in integrating OpenAI APIs, prompt engineering, and working with modern LLM technologies, including LangChain, Hugging Face Transformers, and Ollama/local LLMs. Proficient in developing AI-powered applications using Python, FastAPI, REST APIs, and asynchronous processing, with a focus on building scalable, reliable, and production-ready Generative AI solutions.

PROFESSIONAL EXPERIENCE

Software Engineer - Python & AI **Sep 2024 - Present**

Sigma Solve Inc., Ahmedabad · Full-time

- Integrated OpenAI APIs into Python-based application workflows to incorporate Large Language Model (LLM) capabilities into existing software systems.
- Designed and refined prompts to guide LLM responses according to application requirements and support AI-powered functionality.
- Developed Python application logic and workflows to integrate AI capabilities with existing business processes and application services.
- Built and integrated REST APIs and backend services to connect AI functionality with application components and enable seamless data exchange.
- Implemented asynchronous background processing and automation workflows using Celery and Redis to support scheduled tasks, data processing, and application operations.
- Developed database-backed workflows using PostgreSQL to support data processing, application reliability, and integration across services.

Python Developer (Intern) **May 2024 - Jul 2024**

Crest Data, Ahmedabad

- Utilized Splunk for log analysis, system monitoring, and data visualization to analyze large-scale datasets and develop interactive dashboards.
- Developed data-driven reports and optimized dashboard workflows to support operational monitoring, trend analysis, and data-informed decision-making.

PROJECTS

- **AI369:** Developed an AI-based video analysis workflow for Formula 1 race footage using Roboflow object detection and video-frame processing. Integrated model inference to detect objects across extracted frames and connected detection results with video-processing workflows to support automated highlight clip generation.
- **AiFitCoaches:** Developed AI-powered features for a fitness and diet management application, including image-based calorie estimation to help users track nutritional intake. Built application workflows using FastAPI and Celery to support fitness and meal management functionality, background task processing, and API integration.
- **BirchGold:** Developed Python-based AI workflows for audio-to-text processing and integrated prompt engineering techniques to guide AI-generated responses. Implemented automated response validation to support output consistency and reliable processing within the application workflow.

TECHNICAL SKILLS

AI & Generative AI: OpenAI API, LangChain, Hugging Face Transformers, Ollama / Local LLMs, AI/LLM Integration, Prompt Engineering.

Programming & Backend: Python, Django, FastAPI, Django REST Framework, REST APIs, GraphQL, WebSockets.

Databases & Processing: PostgreSQL, Redis, Celery, Async Processing, Real-Time Processing.

Infrastructure & CI/CD: Git, GitLab CI/CD, Docker, RabbitMQ.

Integrations & Automation: Salesforce, Playwright, Web Scraping.

Soft Skills: Communication, Problem Solving, Time Management, Teamwork.

EDUCATION

B.Tech, Information Technology **2021 - 2024**

Gandhinagar Institute of Technology, Ahmedabad - CGPA 8.65

Diploma, Information Technology **2018 - 2021**

Government Polytechnic, Ahmedabad - CGPA 8.99
