Summary

Backend Engineer with experience building scalable real-time applications using Python, Django, FastAPI, Celery, PostgreSQL, WebSockets, and GraphQL. Skilled in backend automation, REST APIs, AI/LLM integrations, async processing, and distributed systems.

Skills

Python, Django, FastAPI, Django REST Framework, Celery, PostgreSQL, WebSockets, GraphQL, REST APIs, AI/LLM Integration, Prompt Engineering, Async Processing, Backend Architecture, Blockchain, Git, Docker, Redis, API Integration, Automation Systems, Real-Time Processing

Work Experience

Software Engineer Sep 2024 - present

Sigma Solve Pvt. Ltd.

- Built scalable backend systems using Python, Django, Celery, and PostgreSQL for real-time trading and analytics platforms while optimizing application performance, reliability, and large-scale data processing
- Developed real-time transaction monitoring and notification pipelines using WebSockets, GraphQL, and REST APIs for event-driven systems handling live data streaming and asynchronous processing.
- Customized Django admin panels with advanced search, sorting, reporting, and soft deletion functionalities while developing secure internal tools to improve efficiency and system management.
- Designed automation workflows and Celery-based asynchronous background task systems for alerts, analytics, scheduling, and real-time backend operations across distributed services.
- Integrated REST APIs, GraphQL services, Redis, and third-party platforms into production-grade applications while building scalable backend architectures for high-performance systems.

Key Projects

- **AI369:** Built AI-based video processing pipelines using Roboflow and custom object detection models to identify key moments from F1 race videos and generate automated highlight clips from recordings.
- **AiFitCoaches:** Developed AI-driven fitness and diet management backend workflows using FastAPI and Celery with meal scheduling, notifications, and scalable APIs.
- **BirchGold:** Worked on AI-based audio-to-text processing, prompt engineering, and automated response validation systems using Python.

Internship May 2024 - Jul 2024

Crest Data

- Worked with SPLUNK for log analysis, monitoring, and data visualization by creating interactive dashboards to generate actionable insights from large-scale datasets.
- Developed data-driven reporting solutions and optimized dashboard workflows to support system monitoring, operational analysis, and business decision-making processes.

Education

2021 - 2024 BE in IT at **Gandhinagar Institute of Technology** (GPA: 8.65/10)
2018 - 2021 Diploma at **Government Polytechnic** (GPA: 8.99/10)
